

Score Sheet: Ling 6(HL) Test

Name:

Date:

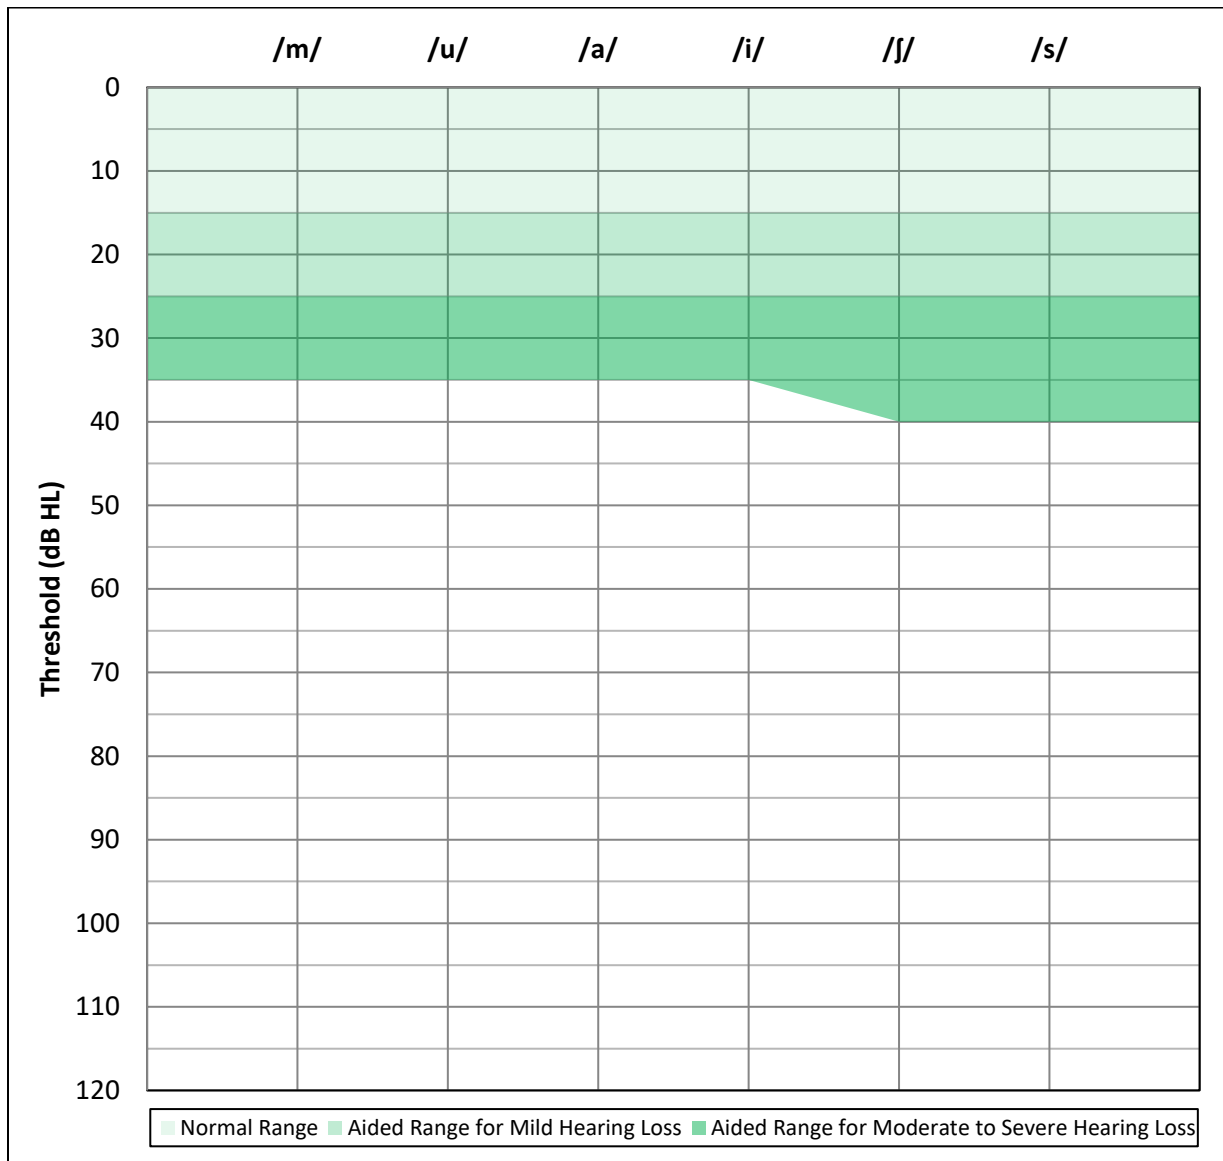

Test Method: Standard CPA VRA

Test Type: Aided Unaided Other

Reliability: Good Fair Poor

Notes on testing condition:

Plot the corrected threshold values in dB HL below:

Notes: This score sheet has been adapted from that published in Glista et al., 2014. Hearing loss ranges are calculated based on listener better ear four-frequency pure tone average values. Aided ranges reflect typical performance for hearing impaired child listeners wearing hearing aids in binaural sound field testing at zero degree azimuths.
